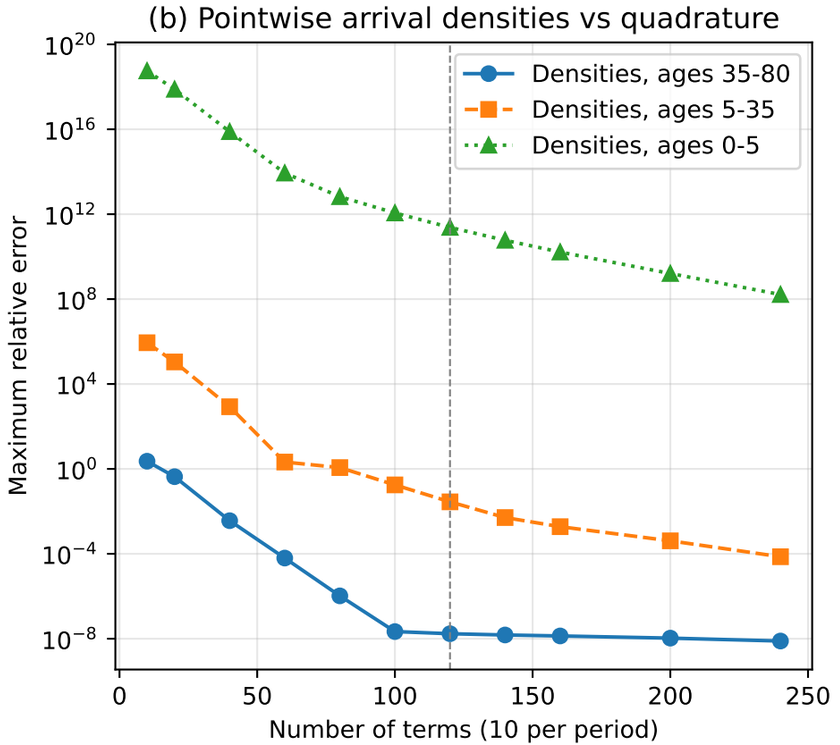
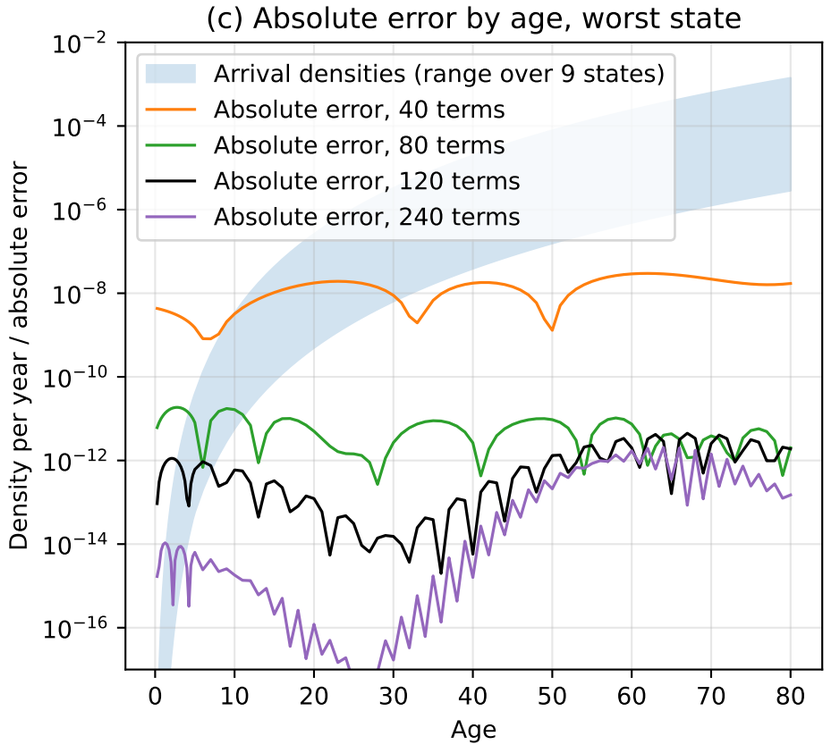
(a) Interval targets vs R reference
Targets, ages 35-80
R reference's own error (step halving)
Maximum relative error
Number of terms (10 per period)



(b) Pointwise arrival densities vs quadrature
Densities, ages 35-80
Densities, ages 5-35
Densities, ages 0-5
Maximum relative error
Number of terms (10 per period)



(c) Absolute error by age, worst state
Arrival densities (range over 9 states)
Absolute error, 40 terms
Absolute error, 80 terms
Absolute error, 120 terms
Absolute error, 240 terms
Density per year / absolute error
Age
